Job description

OCLC - Senior Software Engineer

Job URL

Senior Software Engineer

OCLC is a technology company focused on connecting libraries and making knowledge accessible worldwide. They are seeking a Senior Software Engineer to design, develop, and support scalable cloud-based applications that serve libraries and their users around the globe.

SoftwareWeb Development

H1B Sponsor Likely

Responsibilities

Design, develop, test, deploy, and maintain complex software solutions within the Cloud Library platform

Build high-quality, scalable, secure, and maintainable applications across front-end and back-end systems

Develop and enhance cloud-native services and APIs supporting business-critical applications

Participate in all phases of software development, including requirements analysis, architecture, coding, testing, deployment, and support

Contribute to modernization initiatives and continuous improvement of systems and processes

Provide technical expertise and guidance to engineering team members

Participate in architecture discussions and technical design reviews

Mentor junior and mid-level engineers through collaboration, code reviews, and knowledge sharing

Promote engineering best practices, design patterns, and coding standards

Help identify technical debt and recommend strategic improvements

Conduct code reviews and ensure adherence to quality, security, and performance standards

Support CI/CD processes and DevOps practices to enable reliable software delivery

Troubleshoot and resolve production issues while participating in operational support activities

Participate in monitoring, observability, and incident response efforts

Collaborate with stakeholders to ensure successful delivery of business objectives
