Job description

CGI Digital - Senior Salesforce Developer

Job URL

Senior Salesforce Developer

CGI Digital is seeking a Senior Salesforce Developer to support its existing Salesforce team through a six-month contract with potential extension. The role focuses on independently developing, integrating, testing, deploying, troubleshooting, and maintaining scalable Salesforce solutions using advanced platform functionality and established requirements.

AdvertisingMarketingArt & CreativeAppsDigital MarketingGraphic DesignWeb Design

Responsibilities

Develop, enhance, and maintain custom Salesforce solutions using Apex, Lightning Web Components (LWC), SOQL, Flows, and other Salesforce development tools

Build and support Apex classes, triggers, batch and scheduled processes, asynchronous functionality, and appropriate test coverage

Build, maintain, and troubleshoot API integrations between Salesforce and third-party platforms

Perform full-stack Salesforce development across the user interface, business logic, integration, and data layers

Build technical solutions based on established requirements and independently execute assigned development work once priorities and direction are defined

Troubleshoot, debug, optimize, and improve existing code, integrations, automations, and custom functionality

Follow Salesforce development best practices related to scalability, security, maintainability, and governor limits

Support testing, deployments, and post-deployment troubleshooting

Participate in Scrum meetings and technical discussions and communicate progress, blockers, dependencies, and risks clearly

Work cohesively within the existing Salesforce architecture, team structure, and established development processes

Consistently complete assigned development work within established deadlines
