Job description

Cardiff - Salesforce Administrator

Job URL

Salesforce Administrator

Cardiff is a lending company that provides funding to small businesses across the country. Cardiff is seeking a Salesforce System Administrator to own the administration, stability, optimization, troubleshooting, and continuous improvement of its complex Salesforce environment while partnering with technical teams and business stakeholders.

Responsibilities

Build, maintain, and troubleshoot Salesforce Flows, including record-triggered, screen, scheduled, and autolaunched Flows

Configure custom objects, fields, record types, Lightning pages, validation rules, formulas, reports, and dashboards

Manage users, permission sets, profiles, roles, sharing rules, and field-level security

Troubleshoot Flow failures, permission issues, automation conflicts, data problems, and other Salesforce issues

Troubleshoot record assignment, ownership, routing, and conversion issues across Salesforce automation, assignment rules, integrations, and third-party tools

Perform impact and dependency analysis before changing existing automation or configuration

Evaluate business requirements and existing Salesforce functionality before introducing new fields, automation, or configuration, and recommend the simplest scalable solution that addresses the underlying business need

Test changes in sandbox, support UAT and regression testing, deploy changes, and validate them in Production

Proactively communicate planned Salesforce changes, expected business and system impacts, deployment timing, and post-deployment outcomes to relevant stakeholders. Ensure material Production changes are documented and follow established change-management and review processes

Support Salesforce integrations and collaborate with the Salesforce and Software Engineering teams on more complex technical issues

Support and test managed-package upgrades

Maintain data quality through audits, duplicate management, imports, exports, mass updates, and cleanup

Build reports and dashboards that provide useful business and operational insights

Work directly with stakeholders to translate business requirements into scalable Salesforce solutions

Monitor Production and proactively investigate automation failures and recurring issues

Maintain documentation and provide user support and training when needed

Develop a working understanding of Cardiff's Salesforce architecture, primary business processes, integrations, managed packages, and release process

Review the active Salesforce backlog and understand current production issues and business priorities

Map critical Lead and Opportunity lifecycle automation and identify high-risk dependencies

Begin documenting significant technical debt, recurring issues, and opportunities for improvement

Independently own Salesforce administration and production troubleshooting within the defined scope of the role

Resolve priority issues through root-cause analysis rather than temporary workarounds

Establish stronger visibility into Flow failures, automation conflicts, integration issues, and Salesforce technical debt

Recommend improvements to Salesforce governance, documentation, testing, and release processes

Begin reducing or consolidating obsolete and unnecessarily complex automation

Own a prioritized Salesforce improvement roadmap based on business impact, system risk, and technical debt

Demonstrate measurable improvement in Salesforce stability, issue resolution, documentation, and release quality

Establish clear standards for how new Salesforce requests move from requirements through solution design, testing, UAT, deployment, and Production validation

Provide leadership with a clear understanding of the health of the Salesforce environment, major risks, technical debt, and recommended priorities

Qualification

Required

Salesforce Certified Administrator, required

Salesforce Certified Platform App Builder, required

5+ years of hands-on Salesforce Administrator experience

Demonstrated experience performing root-cause analysis across complex Salesforce automation

Advanced experience designing, troubleshooting, and optimizing Salesforce Flow

Strong understanding of Salesforce order of execution, security, permissions, sharing architecture, and field-level security

Experience working with custom objects, fields, record types, validation rules, formulas, reports, and dashboards

Experience supporting integrations between Salesforce and external applications or APIs

Experience troubleshooting integration users, API-driven record changes, data mappings, and automation conflicts

Experience with sandbox management, UAT, regression testing, deployment, Production validation, and release management

Experience with Data Loader or similar Salesforce data-management tools

Working knowledge of SOQL for data investigation, validation, and troubleshooting

Understanding of Salesforce automation best practices, bulk processing, and governor limits

Experience using debug logs, Flow interviews, Flow Trigger Explorer, scheduled jobs, Setup Audit Trail, and other Salesforce diagnostic tools

Ability to understand dependencies and downstream impact before making changes

Strong communication skills with both technical and non-technical stakeholders

Comfortable using AI-assisted tools for research, troubleshooting, documentation, and productivity

Experience in financial services, lending, or fintech

Experience with Lead and Opportunity lifecycle architecture, routing, assignment, and conversion

Experience supporting and upgrading third-party Salesforce managed packages

Experience partnering directly with Salesforce Developers, Software Engineers, Data teams, Product Managers, and business stakeholders

Additional Salesforce certifications
