Cover letter

Cardiff - Salesforce Administrator

Job URL

Dear Hiring Manager,

Cardiff's need for an experienced Salesforce Administrator to own and optimize a complex Salesforce environment aligns perfectly with my 7+ years of combined Salesforce administration and development experience. At Docker and AWS, I successfully managed complex Flow automations, resolved root-cause issues, and maintained robust user permission models, directly impacting system stability and user satisfaction.

Notably, I reduced automation failure rates by 20% through redesigning Flow architectures and improved integration reliability by 25% by troubleshooting API and automation conflicts. My expertise in sandbox management, UAT, regression testing, and production deployment has consistently ensured smooth, risk-mitigated releases.

I bring deep technical knowledge of Salesforce administration including security architecture, user management, and change governance, paired with strong collaboration skills working alongside developers, product managers, and business stakeholders. My experience supporting financial services and fintech workflows also builds natural continuity with Cardiff's industry and business priorities.

I am confident my proven skills in root-cause analysis, Flow optimization, and managing Salesforce stability will help Cardiff reduce technical debt, improve release quality, and provide clearer insights into system health and risks. I look forward to contributing to your Salesforce team's success.

Sincerely,
Triet Le
