Job description

Concentrix - Salesforce Data360 Developer

Job URL

Salesforce Data360 Developer

Concentrix is an intelligent transformation partner providing technology and services solutions for customer experiences. The Senior Salesforce Data 360 Developer will design, build, and optimize Salesforce Data Cloud solutions, including customer profiles, identity resolution, segmentation, activation, analytics, and enterprise integrations. The role also involves partnering with cross-functional stakeholders, ensuring governance and data quality, and mentoring junior developers.

No H1B

Responsibilities

Lead the design, development, and optimization of Salesforce Data Cloud / Data 360 solutions

Configure identity resolution, unified customer profiles, calculated insights, segmentation, and activation capabilities

Build and manage data ingestion pipelines across CRM, marketing, service, web, and external platforms

Develop enterprise integrations using REST/SOAP APIs, ETL tools, streaming, batch processing, Agentforce, and cloud platforms

Partner closely with architects, marketing teams, analytics teams, and business stakeholders to translate requirements into scalable technical solutions

Ensure strong governance, security, scalability, performance, and data quality across Data Cloud implementations

Support analytics and reporting use cases through segmentation, calculated insights, and customer data activation

Mentor junior developers and help establish development standards, best practices, and technical excellence across the team
