Cover letter

Confluent Health - Salesforce Developer

Job URL

Dear Hiring Manager,

Confluent Health’s need for a skilled Salesforce Developer to enhance and integrate their Salesforce platforms aligns strongly with my 7+ years of experience delivering end-to-end Salesforce solutions across Sales, Service, Marketing, and Health Clouds in highly regulated environments. I bring proven expertise in Salesforce development—including Apex, Lightning Web Components, and OmniStudio—as well as deep Salesforce administration capabilities managing security, profiles, permissions, and data governance aligned to HIPAA, SOC 2, and GDPR compliance frameworks.

At Docker, I developed scalable Apex batch processes handling over 250,000 records monthly, reducing automation failures by 20%, and engineered secure, least-privilege user access models that cut support tickets by 15%. At AWS, I drove portal enhancements via Experience Cloud and automated lead routing workflows that boosted qualified meetings by 10%, underscoring my ability to improve operational efficiency and user adoption.

My experience building robust, API-driven integrations and applying Salesforce AI tools like Agentforce translates naturally to your requirements for improving system interoperability and smart automation. I excel in communicating complex technical designs clearly to stakeholders, ensuring business alignment.

I am excited about the opportunity to bring my solution-oriented approach and Salesforce expertise to Confluent Health to enhance platform performance and compliance while advancing your business goals.

Sincerely,
Triet Le
