Danta Technologies - Salesforce Developer

Job URL

Dear Hiring Manager,

I am excited to apply for the Salesforce Developer Technical Lead role at Danta Technologies. With over seven years of hands-on experience developing and administrating extensive Salesforce platforms, I have successfully led end-to-end project deliveries including Apex development, Salesforce Lightning solutions, and comprehensive platform administration.

At Docker and AWS, I architected and built performant Salesforce Apex batch processes and Lightning Web Components, supporting enterprise-scale data volumes and improving automation reliability by 20%. I directed security and user-access configurations that reduced access-related support issues by 15%. My leadership in integrating Salesforce OmniStudio and AI-assisted Agentforce workflows has substantially enhanced customer and service experiences.

I bring deep expertise in Salesforce development tools including Apex, LWC, Visualforce, REST APIs, and Salesforce security configurations. My ability to translate complex business requirements into scalable technical solutions while mentoring junior developers aligns naturally with the responsibilities of this Technical Lead role.

I look forward to contributing my skills to advance Danta Technologies' Salesforce initiatives and collaborate with your team to deliver innovative CRM solutions.

Thank you for your consideration.

Sincerely,
Triet Le
