Job description

Docker, Inc - Senior Salesforce Developer

Job URL

Senior Salesforce Developer

Docker is a globally distributed, remote-first company building developer tooling and secure infrastructure for software development. Docker is seeking a Senior Salesforce Developer to scale and evolve its go-to-market systems by delivering scalable Salesforce solutions, integrations, automation, data governance, and AI capabilities. The role partners with Sales, Marketing, Customer Success, Finance, Security, and Operations teams while leading Salesforce architecture, DevOps, and technical improvements.

Comp. & BenefitsNo H1B

Unicorn with $2.1B valuation

Responsibilities

Design, develop, test, and deploy scalable Salesforce solutions across Sales Cloud, Service Cloud, and integrated third party systems

Lead the architecture and implementation of Salesforce customizations including Apex, Lightning Web Components (LWC), Flows, integrations, and platform automation

Partner with stakeholders across GTM and Operations teams to gather requirements and translate business needs into technical solutions

Improve and maintain Salesforce data architecture, security model, sharing rules, profiles, permission sets, and governance standards

Build and support integrations between Salesforce and external platforms such as MuleSoft, NetSuite, CPQ, ERP, marketing automation, customer support, and data platforms

Drive platform optimization, technical debt reduction, and continuous improvement initiatives

Own the Salesforce DevOps and release management lifecycle while establishing engineering best practices, including Gearset administration, source control, testing frameworks, CI/CD pipelines, deployment governance, production change management, and technical documentation

Participate in roadmap planning and provide technical leadership for strategic Salesforce initiatives

Manage Agentforce, Slackbot, AI skills, and other AI Salesforce offerings

Troubleshoot complex production issues and implement scalable long-term solutions

Familiarize yourself with the Salesforce team, instance, code base, best practices, design principles, and deployment methodologies

Engage with Product teams for deliverables to prioritize projects

Introduce yourself to the cross functional teams the Salesforce team

Dive Deep into the technology architecture to evaluate performance and refactor code

Engage with our Technical Architect and System Administrators on pain points to identify solutions

Continue to build on best practices to make our instance performant, secure, and scalable

Deliver to project requirements independently

Develop and grow your skill set and career as you become the subject matter expert in our Salesforce instance

Own the Salesforce ecosystem as it relates to third party tooling, integrations, dependencies, and other upstream/downstream systems
