Job description

Fanatics - Senior Salesforce Engineer (Remote)

Job URL

Senior Salesforce Engineer (Remote)

Fanatics is building a global digital sports platform spanning commerce, collectibles, and betting and gaming. Fanatics Betting & Gaming is seeking a Senior Salesforce Engineer to develop and maintain scalable Salesforce solutions, integrate Salesforce with internal and external systems, and support critical internal workflows and customer-facing operations. The role collaborates with Marketing, Operations, Product, Data Engineering, and Backend Engineering teams to deliver reliable platform capabilities.

Responsibilities

Build, and maintain custom Salesforce solutions using Apex, Lightning Web Components (LWC), Flows, and declarative features

Participate in the end-to-end implementation of Salesforce enhancements, from requirements gathering through deployment and support

Apply scalable and maintainable patterns for triggers, flows, automation, and custom components

Write high-quality, testable code with appropriate unit test coverage and participate in code reviews

Develop and maintain integrations between Salesforce and external/internal systems using REST/SOAP APIs, middleware, and event-driven patterns

Partner with backend engineers to design clean integration contracts between Salesforce and Java-based services

Troubleshoot and resolve complex integration and data flow issues across systems

Collaborate with Product Managers, Business Analysts, and cross-functional partners to translate business requirements into technical solutions

Partner with Marketing, VIP, Operations Support, Risk, and Data teams to ensure Salesforce solutions meet business and regulatory needs

Clearly communicate technical decisions, trade-offs, and implementation details to both technical and non-technical stakeholders

Support data migrations, imports/exports, and ongoing data quality initiatives

Ensure strong data integrity, security, access control, and performance across the Salesforce ecosystem

Contribute to platform reliability, availability, and operational excellence

Create and maintain technical documentation for Salesforce customizations, configurations, and integrations

Follow and help evolve engineering best practices related to Salesforce DX, Git workflows, CI/CD pipelines, testing, and deployment strategies

Continuously identify opportunities to reduce technical debt and improve platform scalability

SalesforceApexLightning Web Components (LWC)Salesforce AutomationSalesforce ConfigurationSalesforce Security Model DesignREST/SOAP APIsSalesforce DXGitCI/CD PipelinesData MigrationsSalesforce Platform Developer Certification

Required

3-5 years of hands-on Salesforce engineering experience, with strong proficiency in Apex, Lightning Web Components, and Salesforce automation

Strong experience with Salesforce configuration, including custom objects, flows, validation rules, and security model design

Experience building and maintaining API-based integrations between Salesforce and third-party or internal systems

Working knowledge of Salesforce DX, Git, and CI/CD pipelines

Ability to work independently on complex projects while collaborating effectively within a team

Strong problem-solving skills and attention to detail

Preferred

Salesforce Platform Developer I or II certification

Additional Salesforce certifications (Administrator, App Builder, Architect)

Data migrations and large-scale data operations

Event-driven architectures and distributed systems

Highly available, production-critical platforms

Experience working closely with cross-functional teams such as Marketing, Product, Operations, and Data

Experience working with AI model or agent platforms, including building on or integrating agents into production workflows

Familiarity with platforms such as Anthropic, OpenAI, Amazon Bedrock, LangChain, Google Vertex AI, Microsoft Copilot Studio, CrewAI, or AutoGen is a plus

Familiarity using AI-powered coding assistants to design, build, and test new functionality from the ground up, with the ability to move quickly while maintaining high code quality and test coverage

Interest in leveraging emerging tools and workflows to improve developer productivity and platform throughput
