Job description

Flosum - Salesforce Engineering Manager (US)

Job URL

Salesforce Engineering Manager (US)

Flosum is seeking a Salesforce technical architect and engineering manager to lead development velocity across a team building enterprise applications on the Salesforce Platform. The role combines hands-on technical leadership with people management, overseeing Salesforce and Node.js architecture, scalability, performance, engineering quality, and team development.

Growth Opportunities

Responsibilities

Lead the architecture, performance, and scalability of our Salesforce Platform and Node.js based services. While our applications are deployed primarily on AWS today, they are designed to be scalable and highly available, and you'll ensure architectural decisions follow Salesforce and cloud engineering best practices

You'll own the technical direction of our Salesforce applications, mentor senior engineers, and partner with Product and Engineering leadership to deliver high quality solutions quickly

You'll also manage a team of 10 to 15 developers by setting goals, conducting 1:1s, growing careers, hiring top engineering talent, and removing blockers. You'll balance roadmap delivery with engineering excellence, including code quality, system reliability, platform performance, security, and developer experience

Qualification

Required

8+ years of software engineering experience, with 3+ years leading engineering teams

Strong Salesforce expertise, including Apex, Lightning Web Components, SOQL, Salesforce APIs, and Salesforce platform best practices

Proven Salesforce technical architecture experience designing scalable enterprise solutions

Strong Node.js background and a clear point of view on building maintainable services and integrations at scale

Experience integrating Salesforce with external systems using modern APIs and integration patterns

Deep understanding of software architecture, scalability, security, and performance optimization

Track record of improving engineering velocity, system performance, scalability, and deployment processes in production environments

Proven ability to grow engineers, hire well, and lead high performing engineering teams that consistently deliver results

Preferred

Experience with Salesforce DevOps, CI/CD pipelines, and deployment automation

Experience with AWS, cloud infrastructure, or enterprise SaaS platforms

Experience with Kubernetes, Terraform, or containerization technologies

Salesforce certifications such as Platform Developer I or II, Application Architect, or System Architect

Background scaling SaaS platforms or developer facing products

Benefits

Remote work arrangement
