Cover letter

Humana - Senior Salesforce Engineer

Job URL

Dear Hiring Manager,

As a Senior Salesforce Engineer with over seven years of experience specializing in healthcare and insurance industries, I am confident in my ability to design and deliver scalable Salesforce solutions aligned with Humana's needs. My hands-on expertise includes Apex, Lightning Web Components, Salesforce OmniStudio, REST and SOAP API integrations, and platform security – all critical to optimizing complex business processes in regulated environments.

At Docker, I architected Salesforce OmniStudio solutions that boosted customer service efficiency by 25% and led large-scale Apex processes that reduced automation failures by 20%. My role at AWS strengthened my skills in developing HIPAA-compliant CRM solutions and integrating Salesforce with multi-channel engagement tools, increasing lead conversion rates by 10% through advanced automation and routing.

I am adept at operating independently to solve complex technical issues, making sound architectural decisions, and partnering closely with stakeholders to deliver long-term value. I understand the importance of scalable, maintainable design patterns and am committed to driving continuous improvement in Salesforce ecosystems.

I look forward to the opportunity to contribute my technical expertise and forward-thinking solutions to Humana's Salesforce initiatives.

Sincerely,
Triet Le
