Cover letter

JerseySTEM - TECH712: Salesforce Developer

Job URL

Dear Hiring Manager,

With over 7 years as a Senior Salesforce Developer, I bring proven expertise in designing and maintaining secure, scalable Salesforce solutions that align perfectly with JerseySTEM’s mission to support STEM education via accurate data management and external integrations.

At Docker and AWS, I architected robust Salesforce configurations including objects, fields, and sharing models while building Lightning Web Components and custom API integrations that improved business outcomes by reducing automation errors up to 20% and enhancing client portal usage by 20%. My experience administering detailed security settings and managing complex data imports ensures data integrity and compliance within dynamic environments.

I am adept at designing and executing data import processes and supporting external client app integrations securely, which directly addresses JerseySTEM’s engineering needs for maintaining reliable and secure Salesforce configurations. Additionally, my hands-on experience with Salesforce Flows and Experience Cloud portals equips me to contribute immediately in enhancing end-user support and system usability.

I look forward to bringing this blend of technical leadership and collaborative delivery experience to JerseySTEM to help empower your mission through impactful Salesforce innovations.

Sincerely,
Triet Le
