Cover letter

Lightspeed DMS - Salesforce Administrator

Job URL

Dear Hiring Manager,

Lightspeed's need for a Salesforce Administrator capable of managing and evolving a complex Salesforce environment aligns perfectly with my background. With 7+ years of progressive Salesforce development and administration experience in high-velocity SaaS and technology firms, I specialize in designing declarative and programmatic solutions that support scalable business operations.

At Docker and AWS, I led the development of Apex classes, Lightning Web Components, and Flow-based automations, achieving more than 85% test coverage and reducing automation failures by up to 20%. I have implemented source-driven development processes using Salesforce DX and Copado, cutting deployment times by 40%. Furthermore, I built and maintained robust REST and SOAP API integrations with platforms such as NetSuite, DocuSign, and Certinia, streamlining critical business workflows and improving data accuracy.

My comprehensive grasp of Salesforce security models, including profiles, permission sets, and sharing rules, has consistently reduced security-related support tickets by over 15%. I bring a strong understanding of Salesforce data governance, CI/CD pipelines, and release management, ensuring stable, secure, and performant environments.

Given my direct experience with many of Lightspeed's integrated platforms and my strong foundation in Salesforce architecture and administration, I am confident I can contribute effectively to your team's success.

Sincerely,
Triet Le
