Job description

Mozilla - Staff Application Engineer, Salesforce

Job URL

Staff Application Engineer, Salesforce

Mozilla is a non-profit-backed technology company focused on building an open and accessible internet through products such as Firefox. The Staff Application Engineer, Salesforce will architect, build, and own a Salesforce platform supporting sales and revenue operations, including its initial Sales Cloud implementation. The role will also establish scalable governance, integrations, AI-assisted workflows, and operational practices across the platform.

Responsibilities

Lead the architecture and hands-on development of Mozilla's Salesforce platform across multiple enterprise product lines, and review designs and custom code from internal and external contributors

Define scalable data models, account and opportunity structures, sales processes, role hierarchies, record types, and sharing rules

Build and maintain platform capabilities using Salesforce Flow, validation rules, approval processes, custom objects, page layouts, reports, and dashboards

Design lead-to-cash capabilities spanning quoting, contracting, order workflows, service delivery, entitlements, renewals, and revenue-management integrations

Build and maintain integrations between Salesforce and NetSuite, BigQuery, our contract-management platform, and other operational systems

Establish environment strategy, sandbox governance, source control, automated testing, deployment pipelines, release controls, rollback practices, architecture documentation, and operational runbooks

Design and maintain field-level security, permission models, role hierarchies, and sharing architecture in alignment with Mozilla's security requirements and ISO and SOC 2 controls

Build secure MCP servers and other integrations that expose approved CRM data and actions to AI assistants and agentic workflows

Partner with Sales, Revenue Operations, Finance, Legal, Security, and IT to understand business problems, evaluate tradeoffs, and prioritize platform investments

Establish a sustainable support model and lead the resolution of complex production issues, vendor escalations, and platform risks

Required

At least eight years in Salesforce engineering, administration, or architecture

Experience leading or playing a major technical role in the implementation and ongoing operation of a complex Salesforce environment

Advanced proficiency with Salesforce's declarative capabilities, including Flow, validation rules, approval processes, record types, permission models, and sharing rules

Hands-on ability to read, write, test, and review Apex, SOQL, and Lightning Web Components

Experience designing Salesforce data and security models for multiple business units, product lines, or sales processes

Strong understanding of lead-to-cash processes, including opportunities, quoting, contracting, orders, fulfillment or service delivery, renewals, and finance-system handoffs

Experience integrating Salesforce with enterprise platforms through REST or SOAP APIs, event-driven patterns, middleware, or integration platforms

Experience building AI assistants, agents, or MCP integrations that securely use enterprise data and actions

Ability to communicate architecture decisions and technical tradeoffs clearly to business leaders, technical teams, and implementation partners

Ability to work independently, set priorities, and lead complex work across several teams

A bachelor's degree in Computer Science, Information Systems, Engineering, or equivalent practical experience

Preferred

Salesforce Advanced Administrator, Platform App Builder, Platform Developer, Application Architect, or System Architect credentials

Experience establishing or improving Salesforce environment management, automated testing, source control, CI/CD, and release-management practices

Experience integrating Salesforce with NetSuite or another ERP platform

Experience connecting Salesforce with BigQuery or another enterprise data platform

Experience with Workato, Celigo, MuleSoft, or a comparable integration platform

Experience supporting service contracts, entitlements, delivery operations, subscription renewals, CPQ, or contract-lifecycle workflows

Experience operating Salesforce in an ISO 27001, SOC 2, or similarly controlled environment

Benefits

Generous performance-based bonus plans to all eligible employees - we share in our success as one team

Rich medical, dental, and vision coverage

Generous retirement contributions with 100% immediate vesting (regardless of whether you contribute)

Quarterly all-company wellness days where everyone takes a pause together

Country-specific holidays plus a day off for your birthday

One-time home office stipend

Annual professional development budget

Quarterly well-being stipend

Considerable paid parental leave

Employee referral bonus program

Other benefits (life/AD&D, disability, EAP, etc. vary by country)
