Cover letter

Mozilla - Staff Application Engineer, Salesforce

Job URL

Dear Hiring Manager,

I am excited to apply for the Staff Application Engineer, Salesforce position at Mozilla. With over seven years of progressively responsible experience architecting, developing, and maintaining complex Salesforce environments, I am confident in my ability to deliver a scalable, secure, and integrated Salesforce platform tailored to support Mozilla's sales and revenue operations.

At Docker and AWS, I architected and led development of Salesforce platforms integrating with ERP systems like NetSuite and analytics tools such as BigQuery, implemented lead-to-cash process automations, and established robust environment governance including automated testing and CI/CD pipelines. I reduced automation failures by 20%, accelerated qualified meeting bookings by 10%, and enhanced user access security, aligning closely with compliance frameworks like ISO 27001 and SOC 2.

My hands-on expertise with Salesforce declarative capabilities, Apex, Lightning Web Components, integrations, and AI-assisted workflows (Agentforce, Einstein) aligns directly with your requirements for platform governance and operational excellence. Additionally, my experience with advanced security models, environment strategy, and release management equips me to be an effective technical leader navigating cross-team collaborations and vendor relationships.

I look forward to contributing my skills to help Mozilla build a powerful, secure, and future-proof Salesforce platform that accelerates revenue growth and operational efficiency.

Thank you for your consideration.

Sincerely,
Triet Le
