Cover letter

NexLogic Systems - CRM/Salesforce Developer - RCI-PHS-1001

Job URL

Dear Hiring Manager,

I am excited to apply for the CRM/Salesforce Developer position at NexLogic Systems. With over seven years of experience delivering scalable, secure, and efficient Salesforce solutions, I am confident in my ability to address your critical engineering challenges.

Your need for a developer who can design and deploy custom Salesforce solutions, develop integrations, and troubleshoot complex issues resonates with my background at Docker and AWS, where I engineered API-driven integrations and optimized Salesforce automation for over 250,000 monthly records, achieving a 20% reduction in automation failures. I have hands-on experience with Salesforce OmniStudio, REST and SOAP APIs, Apex programming, and complex security models, matching your requirement for customization and configuration expertise.

At AWS, I drove increases in qualified lead engagement by 10% through process automation and reduced user support tickets by 15% via improved security management, demonstrating my ability to improve business processes and system usability. My experience working in HIPAA-regulated environments also aligns with your industry compliance needs.

My combined technical depth with Salesforce and modern .NET technologies, including C#, MVC, REST APIs, and SSRS, allows me to bridge CRM platforms with diverse enterprise systems effectively. This makes me a strong fit to contribute immediately to your projects and enhance your Salesforce ecosystem’s reliability and performance.

Thank you for considering my application. I look forward to discussing how I can add value to NexLogic Systems.

Sincerely,
Triet Le
