Responsibilities

Design and own Salesforce data models across core clouds (Sales, Service, Financial Services, Consumer Goods)

Define object models, relationships, field strategy, and data lifecycle management

Ensure scalability, performance, and alignment with Salesforce best practices

Lead data governance, naming conventions, and standards

Architect and oversee data migrations from legacy systems (ERP, CRM, custom databases)

Define strategies for data synchronization, deduplication, and master data management

Establish and enforce data quality frameworks (validation, deduplication, enrichment)

Partner with stakeholders on data ownership, stewardship, and compliance

Support regulatory and security requirements (PII, GDPR, role-based access)

Design data structures optimized for Salesforce reporting, dashboards, and analytics

Enable downstream use cases for Einstein, AI, and advanced analytics

Support Data Cloud and Customer 360 initiatives where applicable
