Job description

Technatomy Corporation - Salesforce Architect

Job URL

Salesforce Architect

Technatomy Corporation delivers technology solutions for government agencies, including the Department of Veterans Affairs. The Salesforce Architect will design, implement, and support scalable Salesforce solutions while providing hands-on development, integration, technical leadership, and mentorship within Agile Scrum teams.

Information TechnologyInformation Services

No H1BU.S. Citizen Only

Responsibilities

Design scalable Salesforce solutions that align with business objectives, enterprise standards, and platform best practices

Translate business requirements into solution designs, technical specifications, and implementation approaches

Configure and customize Salesforce using declarative capabilities including Flows, Validation Rules, Lightning App Builder, Dynamic Forms, Permission Sets, and other platform features

Develop and maintain custom functionality using Apex, Lightning Web Components (LWC), SOQL, asynchronous processing, JavaScript, and other Salesforce technologies

Design Salesforce data models, security architecture, sharing strategies, record access, and user experience

Design, develop, and support integrations using Salesforce APIs, Platform Events, middleware platforms, and service-based integration patterns

Collaborate with developers, administrators, QA, DevSecOps, UX designers, Product Owners, and business stakeholders to deliver high-quality Salesforce solutions

Participate in Agile ceremonies including backlog refinement, Sprint Planning, estimation, technical design discussions, release planning, and retrospectives

Perform technical design reviews, code reviews, and architectural assessments to ensure quality, maintainability, and adherence to standards

Troubleshoot complex production issues involving integration, data integrity, platform performance, security, and application functionality

Identify technical risks, recommend mitigation strategies, and communicate impacts to project leadership

Support CI/CD processes, deployments, environment management, and release activities

Develop reusable architecture patterns, technical documentation, and implementation standards

Mentor developers and administrators through coaching, code reviews, design guidance, and knowledge sharing

Evaluate new Salesforce platform capabilities and recommend adoption where they improve business value, user experience, or operational efficiency
