Responsibilities

Lead the configuration and development for Salesforce and our integrated tools to support complex logic

Serve as a key driver for our AI roadmap, specifically focusing on implementing Agentforce, Voice Recognition, and Outreach Automation

Develop technical diagrams, integration standards, and better ways to manage our environments

Own your code from start to finish

Lead design discussions to make sure what we build fits with our global governance and enterprise standards

Advise other engineers on the team through code reviews and sharing best practices around readability, scalability, and test coverage

Work with business stakeholders to give technical guidance on security and performance, turning their requirements into actual solutions
