Responsibilities

Review and understand user stories, acceptance criteria, and business requirements

Partner with the Lead Salesforce Engineer to define solutions that align with Salesforce best practices, enterprise technical strategies, and product priorities

Translate complex business needs into maintainable and scalable technical solutions

Participate in technical design discussions and document important solution decisions

Deliver solutions that meet expectations for quality, stability, scalability, security, and resilience

Design and develop Salesforce solutions using configuration, customization, and appropriate integration patterns

Implement new features and enhancements using established engineering standards and approved change-management processes

Develop and maintain Apex, Lightning Web Components, Flows, integrations, and supporting platform capabilities

Conduct unit testing including functional, integration, regression, and performance testing

Provide ongoing support for service requests, routine maintenance, production incidents, and general application operations

Troubleshoot complex issues across Salesforce and connected enterprise systems

Continuously improve solutions to strengthen system stability, scalability, resilience, and maintainability

Use automation to streamline testing, improve delivery workflows, and reduce manual processes

Support observability and monitoring capabilities that enable proactive issue detection, notification, and response

Contribute to improvements in CI/CD, DevOps, development standards, and engineering practices

Provide technical guidance to junior and mid-level engineers

Help engineers build foundational development, testing, troubleshooting, and solution-design skills

Share product and domain knowledge so other team members can grow and contribute effectively

Apply technical expertise to help the team investigate and resolve complex software issues

Collaborate with product owners, architects, business partners, and other technology teams

Contribute to reusable patterns, technical documentation, engineering standards, and team best practices

Participate in the broader technology community through internal forums, industry events, open-source contributions, or personal technology projects
