Responsibilities

Lead the end-to-end development of Salesforce features and enhancements using Apex, LWC, and Flow

Build sophisticated Lightning Web Components (LWC) to deliver intuitive, high-performance user experiences

Configure and customize Salesforce CPQ and Revenue Cloud to support quote-to-cash and revenue processes

Collaborate with product owners, business analysts, and QA to deliver high-quality, user-focused solutions

Integrate Salesforce with other enterprise systems using Informatica for ETL and data synchronization

Implement and manage CI/CD pipelines using Gearset for version control, deployments, and release management

Conduct code reviews, enforce standards, and mentor junior developers to elevate team capabilities

Troubleshoot and optimize applications for speed, scalability, and stability

Stay up to date with Salesforce releases and emerging best practices and identify opportunities for platform enhancement
