Cover letter

YO AI Labs - Salesforce Developer - Remote

Job URL

Dear Hiring Manager,

I am excited to apply for the Salesforce Developer role with YO AI Labs. With over 7 years of experience as a Senior Salesforce Developer focused on CRM data management, workflow automation, and reporting, I am confident in my ability to effectively support real-world Salesforce workflows and contribute to your next-generation AI system initiatives.

At Docker and AWS, I engineered scalable automation and created comprehensive reports and dashboards that improved operational visibility by up to 40% and enhanced data quality by 30%. I have extensive experience managing Leads, Contacts, Accounts, and Opportunities, automating business processes using Salesforce Flow and Apex, and producing accurate, actionable reports – all core requirements in your job description.

My hands-on work with AI-driven Agentforce case triage and implementation of secure, governed CRM access aligns well with YO AI Labs' focus on high-quality interaction data and workflow accuracy. Additionally, my experience integrating Salesforce with external platforms using REST APIs and maintaining HIPAA compliance in healthcare environments demonstrates my ability to handle complex, regulated data securely and efficiently.

I am eager to bring my practical Salesforce development expertise and passion for workflow optimization to YO AI Labs, ensuring your Salesforce environment supports both business needs and innovative AI capabilities.

Thank you for your consideration.

Sincerely,
Triet Le
