Growth Opportunities

H1B Sponsor Likely

Responsibilities

Lead Salesforce platform design and custom development using Apex, JavaScript, Lightning Web Components, REST APIs, and GraphQL

Act as a technical architect and hands-on Salesforce developer to solve complex platform challenges

Design technical architecture solutions that integrate Salesforce with internal systems, focusing on security, scalability, and performance

Make informed architectural decisions by evaluating tradeoffs, benefits, risks, and recommendations

Stay current with Salesforce releases and guide the team on new features and implementation opportunities

Drive UX and design strategies to improve platform adoption and user experience

Collaborate with business analysts and product managers to translate requirements into scalable technical solutions

Develop and manage off-platform automation scripts using Python or similar tools

Support security efforts by reviewing Salesforce Shield event logs and monitoring data

Champion engineering best practices for reusable, scalable, and maintainable code

Mentor team members through code reviews and constructive feedback
