Bright Vision Technologies - Salesforce Technical Consultant

Job URL

Dear Hiring Manager,

Bright Vision Technologies' need for a Salesforce Technical Consultant capable of delivering robust, production-grade Salesforce solutions closely aligns with my 7+ years of enterprise Salesforce development experience. At Docker and AWS, I have engineered scalable Apex and Lightning Web Component solutions, integrating complex systems through REST and SOAP APIs while adhering to platform limits and security best practices. Notably, I reduced automation failures by 20% and improved lead qualification rates by 10% through optimized automation and routing logic.

My expertise includes Salesforce DX-driven source control, Agentforce AI use cases, advanced Flow automation, and comprehensive security model implementations, which directly address your requirements for long-term maintainability and complex enterprise workflows. I bring strong troubleshooting skills honed in high-scale environments to ensure resilient, performant solutions.

I am confident that my combined technical proficiency and hands-on experience with Salesforce integrations, AI-driven automation, and declarative development make me an excellent candidate to help Bright Vision deliver innovative, effective Salesforce solutions.

Thank you for your consideration.

Sincerely,
Triet Le
