Job description

Lasso Informatics - Salesforce Developer

Job URL

Salesforce Developer

Lasso Informatics develops a platform that helps researchers manage and use complex scientific and clinical research data. The Salesforce Developer will build and maintain Salesforce solutions using Apex, Lightning Web Components, Flows, and REST APIs, while collaborating with administrators, QA engineers, analysts, and developers on testing, integrations, deployments, and platform quality.

Responsibilities

Design and build Salesforce solutions in Apex, including triggers, batch classes, scheduled jobs and asynchronous processing

Build responsive, reusable Lightning Web Components

Create and maintain Salesforce Flows: record-triggered, screen, scheduled and autolaunched

Develop and consume REST APIs to connect Salesforce with our other systems

Configure objects, fields, validation rules, permissions, profiles and custom metadata

Write Apex test classes and keep our code coverage and quality standards high

Troubleshoot performance, integration, security and deployment issues

Take part in code reviews, testing, release management and production deployments

Use Bitbucket and Salesforce CLI for source control and deployment

Use Claude or a similar AI tool to support development, code review, troubleshooting, documentation and test creation

Work closely with System Administrators, QA engineers, scientific analysts and other developers

Qualification

Find out how your skills align with this job's requirements. If anything seems off, you can easily click on the tags to select or unselect skills to reflect your actual expertise.

ApexSOQLSOSLSalesforce Lightning Web ComponentsSalesforce FlowsREST APIsSalesforce SecurityApex Unit TestingGitCI/CDGenerative AI ToolsSalesforce Platform Developer Certification

Required

Proven experience as a Salesforce Developer

At least 3 year of experience in Salesforce development

Strong knowledge of Apex, SOQL, SOSL and Salesforce governor limits

Hands-on experience building Lightning Web Components

Experience designing and maintaining Salesforce Flows

Experience building and integrating REST APIs

Working knowledge of Salesforce security: sharing rules, profiles, permission sets and role hierarchy

Experience writing Apex unit tests and debugging Salesforce applications

Familiarity with Git-based development and CI/CD

Ability to translate business requirements into reliable technical solutions

Experience using Claude or another generative AI tool in a software development workflow

You hold yourself to a high standard and bring real craft to your code

You make the people around you better

You stay curious and keep learning

You see a problem and start solving it, without waiting to be asked

You keep the whole picture in view and notice how a change in one place ripples through the org, the integrations and the collaborators who depend on it

You write clean, tested code and document your work so the next developer can follow it

You juggle several priorities at once and work well on a distributed team

You take data security and responsible AI use seriously

Preferred

Salesforce Platform Developer I or II certification

Experience with Salesforce Experience Cloud

Knowledge of OAuth 2.0, SSO and external authentication providers

Experience with Salesforce CLI, scratch orgs and automated deployment pipelines

Familiarity with Agile development and Jira

Strong communication, problem-solving and documentation skills

Benefits

A flexible, hybrid or remote position.

Work that matters, with scientific and clinical impact you can point to.

A platform that keeps evolving, so you are never maintaining the same three objects for years on end.

Room to grow with a mission-driven company at the front of research data management.

A sharp, multidisciplinary team that is good at what it does and good to work with.
