Job description

ASPCA - Salesforce Technical Lead

Job URL

Salesforce Technical Lead

The American Society for the Prevention of Cruelty to Animals (ASPCA) is a nonprofit organization whose Information Technology department supports systems that help staff, partners, and communities improve animal welfare. The Salesforce Technical Lead serves as the primary technical authority for the organization’s Salesforce instance, leading Salesforce professionals and overseeing solution planning, development, deployment, support, data integrity, and system optimization.

No H1B

Responsibilities

Manage a team of 3 employees to succeed in their role by communicating clear expectations, providing opportunities for learning & development, and building positive and trusting relationships

Support your direct reports by holding regular effective feedback conversations, career conversations, annual performance evaluations, and ongoing check-in conversations with each team member on a cadence that’s appropriate for their role(s)

Lead and develop a team of Salesforce professionals including a Senior Salesforce Developer, Salesforce Developer, and Salesforce Administrator/Release Manager; imbue team with a good understanding of the ASPCA's mission, teams, and priorities

Ensure the most significant efforts of the team are aligned to the most significant outcomes; continually assess and redirect team efforts for maximum impact

Provide training and career growth opportunities that empower the team to lead projects and take on the day-to-day management of initiatives

Oversee activities of the team and ensure project plans and delivery commitments are met

Work with team members to identify professional opportunities for growth and provide necessary mentoring, coaching, and training; ensure effective cross-training and proactively look for and fill gaps in the team's skills

Perform people management and support tasks for team, including approving timesheets and scheduling requests, regular 1-1 meetings, quarterly/semi-annual performance/development meetings, annual performance reviews and goal-setting tasks

Appraise individual and team performance: provide feedback, remediation, and motivation

Interview and assess candidates for open positions

Serve as the primary technical authority for the Information Technology Salesforce instance initiatives, providing technical guidance and mentorship to the team, fostering best practices and code quality

Lead and be responsible for the planning, development, and implementation of custom and scalable Salesforce solutions

Translate business requirements into well-architected solutions that best leverage the Salesforce platform and products

Oversee the creation and management of administration processes including workflows, validation rules, approval processes, assignment rules, processes, and flows

Apply in-depth knowledge of the standard capabilities of Salesforce and successfully expand on those capabilities using custom code as needed and third-party integrations

Oversee technical initiatives to produce highly optimized, well-architected and easy-to-maintain solutions

Identify synergies and opportunities for optimization and templatization of code for larger impact across development efforts

Advise on complex technical needs by identifying possible short-term and long-term solutions

Oversee the CI/CD processes working closely with the Salesforce Administrator/Release Manager on consistent and repeatable pipeline management ensuring successful deployments using Gearset

Collaborate with IT Product Managers to help develop business solutions and understand the business workflows

Meet with clients to determine and document business, functional, technical requirements, and design deliverables

Clearly communicate with team and where necessary to stakeholders the current state of a project, the benefits and risks to a solution's feasibility and functionality, and detailed level of effort estimates for proposed solutions

Collaborate with Product Development and Product Management team members and other stakeholders to proactively identify new and creative opportunities to use Salesforce and make efficiencies with existing products

Be the authority and champion of Salesforce to help identify when Salesforce would be the right application and empower end-users currently using Salesforce

Assist in prioritization and ongoing roadmap of Salesforce initiatives, and collaborate across the organization on the creation, execution, and prioritization of configuration and customization requests that support business priorities

Work closely with program and technology colleagues to understand the organization's strategy and implement scalable, modern, long-term solutions

Oversee the development of reports, dashboards, workflows, and processes to continuously monitor data quality and integrity

Conduct code reviews, enforce standards, optimize performance, and ensure adherence to security protocols

Ensure system and data integrity by establishing end-user best practices

Monitor, assess and report on Salesforce system health and usage; identify needed system improvements

In conjunction with the team, align and maintain user profiles, roles, permissions, record distribution, security, queues, licenses, capacity, database, and storage limits

Serve as the point of escalation on complex issues
