Job description

Avalara APAC - Salesforce Solution Architect

Job URL

Salesforce Solution Architect

Avalara is a cloud compliance platform company that helps define the relationship between tax and technology. The Principal Salesforce Platform Architect will define and govern enterprise Salesforce architecture, establish standards and roadmaps, and align Salesforce with revenue operations, customer experience, data, integration, and AI strategies. The role will also lead architecture governance, platform rationalization, integration alignment, and cross-functional enablement.

Responsibilities

Ensures Salesforce supports scalable revenue growth and pipeline predictability

Reduces operational friction across Lead-to-Sale, Q2C, and Customer Experience workflows

Enables faster delivery through reusable architecture patterns

Improves consistency and quality of customer interactions across Sales and Service

Enables better data integrity and CX360 visibility

Supports faster onboarding, support resolution, and expansion experiences

Establishes a governed Salesforce architecture across domains

Reduces duplication, customization sprawl, and technical debt

Aligns Salesforce with enterprise data, integration, and AI strategies

Define and maintain the enterprise Salesforce architecture strategy and roadmap

Establish platform guardrails, design principles, and capability models

Ensure Salesforce architecture aligns with Lead-to-Sale, Q2C, and Customer Experience strategies

Partner with Enterprise Architects to align platform strategy with business capability roadmaps

Define and enforce standards for: + Data models + Object design + Integration patterns + Security and access controls + Environment and release management

Establish reusable design patterns to reduce custom development and improve scalability

Lead architecture reviews for Salesforce-related initiatives

Guide Solution Architects and delivery teams in applying Salesforce architecture standards

Ensure consistency of system design across delivery pods

Translate architecture runway into actionable guidance for development teams

Reduce rework by ensuring design alignment early in delivery cycles

Define integration patterns between Salesforce and: + Billing and finance systems + Product and usage platforms + Customer Data Platform (CDP) + Support and CX systems

Ensure Salesforce participates as a governed component of the enterprise data architecture

Align Salesforce data models with Customer360 / CX360 strategies

Define how AI capabilities (Einstein, external AI platforms, CDP-driven signals) are embedded into Salesforce workflows

Enable AI-driven use cases such as: + Lead and opportunity scoring + Sales prioritization + Case routing and support automation + Customer insight and recommendations

Ensure AI implementations are explainable, governed, and aligned to enterprise standards

Identify and eliminate redundant functionality across Salesforce and adjacent tools

Reduce customization complexity and improve maintainability

Drive consolidation of overlapping capabilities into scalable platform solutions

Serve as the enterprise authority for Salesforce architecture

Partner with: + Marketing, Sales, RevOps + Finance and Q2C teams + Customer Experience and Support + Data & AI platform teams

Raise architecture maturity across delivery teams and stakeholders

Participate in enterprise architecture governance forums

Salesforce architecture strategy and roadmap formally adopted across domains

Reduction in redundant customizations and overlapping platform capabilities

Measurable improvement in platform stability, scalability, and delivery consistency

Clear and reusable integration patterns adopted by delivery teams

AI-enabled Salesforce workflows deployed with measurable business impact

Positive stakeholder feedback from Sales, RevOps, and Customer Experience leadership

Hold high standards for platform architecture quality, clarity, and scalability

Exercise strong judgment in balancing speed, flexibility, and long-term sustainability

Raise the technical and operational maturity of Salesforce delivery teams

Challenge fragmented or duplicative solutions with data and architectural discipline

Leave the Salesforce ecosystem stronger, simpler, and more scalable than it was found

Demonstrate applied AI capability within Salesforce and related workflows

Identify and implement AI use cases that improve measurable outcomes (conversion, productivity, resolution time)

Ensure AI solutions are explainable, secure, and aligned to enterprise governance

Quantify AI impact (time saved, efficiency gains, revenue influence)

Elevate AI capability across platform and delivery teams
