Job description

Lisinski Law Firm - Salesforce Cloud Architect

Job URL

Salesforce Cloud Architect

Lisinski Law Firm is a humanitarian immigration practice committed to supporting individuals and families seeking safety, stability, and a path forward. The Salesforce Cloud Architect will provide hands-on technical leadership for scalable solutions across multiple Salesforce clouds, including architecture, integrations, automation, data structures, governance, and document-centric workflows. The role will collaborate with stakeholders and technical teams to deliver secure, maintainable, and high-performing Salesforce solutions.

ConsultingGovernmentLegalLaw Enforcement

Responsibilities

Design end-to-end Salesforce architecture across Sales Cloud, Service Cloud, Revenue Cloud, Experience Cloud, and the Salesforce Platform to address complex business and technical requirements

Define the long-term Salesforce architecture strategy, platform roadmap, and technical standards for scalability, performance, security, reliability, and maintainability

Evaluate business requirements and determine the appropriate use of native Salesforce capabilities, configuration, automation, custom development, and third-party solutions

Design scalable data models and automated workflows for complex, high-volume, and document-centric operations, including document generation, electronic signatures, optical character recognition, storage, and secure sharing

Establish reliable integration architecture between Salesforce and enterprise applications using APIs, middleware, event-driven solutions, and other appropriate integration patterns

Lead technical design sessions and provide architectural oversight for custom object modeling, Apex, Lightning Web Components, Salesforce Flow, APIs, and third-party integrations

Define and enforce platform governance, security architecture, code review, testing, release management, documentation, and deployment standards

Monitor platform performance, capacity, health, and Salesforce limits while identifying opportunities to improve reliability, efficiency, and the user experience

Partner with business stakeholders, product owners, enterprise architecture, infrastructure, cybersecurity, and data teams to align Salesforce solutions with business and technology objectives

Evaluate emerging Salesforce capabilities, address technical debt and legacy customizations, and mentor technical teams in architecture principles, development standards, and platform best practices

Required

Bachelor's degree in Computer Science, Engineering, or a related field

6-10 years of Salesforce experience, including at least 3 years in an architect role focused on cloud development

Demonstrated experience architecting solutions across Sales Cloud, Service Cloud, Revenue Cloud, Experience Cloud, and the broader Salesforce Platform

Proven experience designing scalable integrations between Salesforce and enterprise applications using APIs, middleware, event-driven architecture, and related integration technologies

Experience establishing Salesforce development, testing, deployment, release-management, and platform-governance standards using tools such as Gearset, Copado, Jenkins, or Salesforce DX

Experience designing data-intensive and document-centric workflows involving automated document generation, optical character recognition, electronic signatures, storage, and secure information sharing

Demonstrated ability to evaluate technical debt, modernize legacy solutions, and design secure, maintainable architecture that supports long-term platform scalability

Experience working in Agile or Scrum environments and partnering with product owners, business analysts, developers, administrators, and enterprise technology teams

Decision Quality: Evaluates complex business and technical requirements to select Salesforce solutions that appropriately balance scalability, security, performance, maintainability, user needs, and long-term business value

Drives Results: Translates architecture strategy into secure, reliable, and high-performing Salesforce solutions that improve automation, operational efficiency, platform stability, and the user experience

Manages Complexity: Integrates complex business processes, high-volume data structures, document-centric workflows, security requirements, and enterprise systems into cohesive multi-cloud Salesforce architecture

Optimizes Work Processes: Identifies opportunities to simplify workflows, reduce technical debt, strengthen platform governance, and apply automation or emerging Salesforce capabilities to improve efficiency and reliability

Communicates Effectively: Clearly explains architectural decisions, technical risks, standards, and solution recommendations to technical and nontechnical stakeholders while leading design discussions and promoting alignment across teams

Advanced knowledge of Salesforce architecture, including data modeling, platform limits, security and sharing models, identity and access management, multi-org environments, and integration patterns

Strong hands-on knowledge of Apex, Lightning Web Components, Visualforce, Salesforce Flow, Agentforce, Einstein AI, and Salesforce APIs, including REST and SOAP services

Strong analytical, problem-solving, communication, and stakeholder-management skills, with the ability to explain complex architectural concepts to both technical and nontechnical audiences

Preferred

Salesforce Certified Application Architect or Salesforce Certified System Architect credential strongly preferred

Salesforce Certified Technical Architect certification is a plus
