Job description

RowCal - Senior Salesforce Developer

Job URL

Senior Salesforce Developer

RowCal is an HOA and Property Management company focused on improving HOA communities through innovative services and technology. The Senior Salesforce Developer designs, develops, integrates, secures, and supports scalable Salesforce solutions, while partnering with stakeholders to improve operational efficiency, data accessibility, and digital transformation.

ConsultingReal EstateProperty ManagementRental Property

Growth Opportunities

Responsibilities

Design, develop, test, and deploy custom Salesforce solutions using Apex, Lightning Web Components, SOQL, Flow, and platform events

Own technical design decisions, including data modeling, automation architecture, performance optimization, scalability, and error handling

Maintain and enhance custom Salesforce applications, custom objects, and platform functionality

Refactor legacy solutions and reduce technical debt while maintaining platform stability

Evaluate and recommend technical approaches that balance functionality, scalability, and maintainability

Design, build, and maintain integrations between Salesforce and internal or third-party business systems

Support data synchronization, data governance, and platform interoperability initiatives

Ensure accurate and reliable movement of data between Salesforce, operational systems, and enterprise reporting platforms

Partner with technology teams to support Microsoft Azure, Microsoft Fabric, and data platform initiatives

Implement monitoring, logging, and alerting capabilities to proactively identify and resolve integration issues

Implement and maintain security best practices, access controls, field-level security, and sharing models

Ensure development solutions comply with organizational standards and applicable privacy requirements

Support platform governance by reviewing new applications, integrations, and enhancement requests

Maintain technical documentation, standards, and development practices that enable long-term platform sustainability

Manage the Salesforce development lifecycle, including source control, code reviews, testing, deployment, and release management

Establish and maintain development standards, naming conventions, and coding best practices

Support sandbox strategy, deployment planning, testing coordination, and production releases

Review and validate work performed by external developers and consulting partners

Evaluate opportunities to improve operational efficiency through automation, AI, and Salesforce platform capabilities

Develop proofs of concept and pilot solutions to assess business value before implementation

Stay current with Salesforce releases, platform enhancements, and industry best practices

Recommend new technologies and capabilities that support organizational goals

Participate in technology planning and prioritization processes

Partner with business stakeholders to translate requirements into technical solutions

Support troubleshooting, root cause analysis, and ongoing platform optimization efforts

Perform other duties as assigned
