Job description

Salesforce - GTM Builder

Job URL

GTM Builder

Salesforce is an AI CRM company building products that help humans and AI agents drive customer success. The GTM Builder connects go-to-market and product teams, develops reusable agent skills and references, translates business requirements into technical capabilities, validates solutions against customer environments, and enables field teams to use them.

Responsibilities

Be the conduit. Carry what the field and our customers need into Product, and carry what the product can do back out to the field. Nothing gets lost in translation in either direction

Build the skills. Develop the agent skills, references, and reference patterns that let our agents solve the requirements customers ask for most, aimed at covering eighty percent of them out of the box

Find the patterns. Work across many customer requirements and see the shape they share. Build once for the pattern rather than many times for the instance

Toggle between both languages. Translate a business requirement into a technical capability, and a technical capability into a business outcome, without losing precision either way

Prove it works. Test what you build against real customer requirements and real environments before it reaches the field

Operate. Keep a clear view of what is built, what is in progress, and what the coverage actually is. Report it plainly

Leave capability behind. Document and teach what you build so the field can use it without you in the room

Qualification

Find out how your skills align with this job's requirements. If anything seems off, you can easily click on the tags to select or unselect skills to reflect your actual expertise.

Salesforce Platform DevelopmentApexSalesforce FlowLightning Web ComponentsSalesforce Data ModelingSalesforce IntegrationsAI Coding AgentsSalesforce Certifications

Required

5+ years building on the Salesforce platform: Apex, Flow, Lightning Web Components, data modeling, and integrations

You have shipped to production and supported what you shipped

You understand how customers actually buy and what they are trying to achieve

You can sit with a business leader, get to the real requirement, and know which of it matters

You are organized, you track your own coverage and progress, and you can be trusted with a program without

supervision

You move between business requirements and technical capabilities comfortably, and you are credible with sales leaders and engineers in the same week

You build with AI coding agents in your daily work and you have a clear view of where they are strong and where they need a human

You instinctively look for the reusable version of a one off request

Degree or equivalent relevant experience required

Experience will be evaluated based on the core competencies for the role

Preferred

Salesforce certifications (Administrator, Platform Developer, Application Architect or System Architect)

Solution engineering, forward deployed engineering, consulting, or technical product management background

Experience with Marketing Cloud, Revenue Cloud, or Data 360

Benefits
