Cover letter

Sonoma Consulting - Sr. SFDC Architect

Job URL

Dear Hiring Manager,

Sonoma Consulting requires a seasoned Salesforce Architect to lead technical strategies and provide enterprise architecture solutions. In my current role as a Senior Salesforce Architect at Docker, Inc., I successfully engineered and optimized Salesforce solutions, spearheading initiatives that enhanced workflow automation by 20% and improved AI adoption across our operations. My ability to develop scalable, Apex-based integrations at AWS further compounded the efficiency and performance of our Salesforce architecture.

With over 7 years of experience in Salesforce development and architecture, I excel in designing and deploying secure and robust systems. At AWS and Deloitte, I leveraged my expertise to mentor teams and implement HIPAA-compliant healthcare workflows, significantly reducing process times. These experiences translate seamlessly to the challenges presented at Sonoma Consulting, allowing me to drive independent projects and architectural frameworks effectively.

I hold several Salesforce certifications, broadening my skill set to support thought leadership within your team. Triet Le's background is perfectly aligned to fortify your consulting capabilities and deliver exceptional client experiences. I am eager to apply my analytical skills and technical prowess to Sonoma Consulting's architectural challenges.

Sincerely,

Triet Le
