Cover letter

Abnormal AI - Salesforce Administrator, CPQ

Job URL

Dear Hiring Manager,

I am excited to apply for the Salesforce Administrator position at Abnormal AI, bringing over seven years of progressive Salesforce experience, specifically focused on Salesforce CPQ configuration and quote-to-cash workflows. My current role at Docker involves owning complex CPQ configurations including product and price rules, bundles, and approval flows, closely aligning with your core needs. I have repeatedly driven improvements in contract generation and e-signature integrations leveraging DocuSign, resulting in smoother contract execution cycles.

In addition to technical expertise, I excel in managing Salesforce request intake processes from requirements gathering through prioritization and resolution, often utilizing AI-assisted tooling to streamline workflows and improve documentation quality. At Docker, I spearheaded the implementation of AI-powered process automation that cut requirements gathering time by 30%, ensuring agile responsiveness to user needs.

My hands-on experience with Salesforce declarative automation such as Flows, validation rules, and permission sets strengthens my ability to enforce governance while ensuring flexibility. Partnering with SalesOps, MarketingOps, and RevOps teams has been critical to my success in delivering scalable, user-centric Salesforce solutions.

This blend of technical skill, process ownership, and cross-functional collaboration positions me to contribute immediately to Abnormal AI’s Salesforce CPQ platform and drive operational excellence within your quote-to-cash workflows.

Thank you for your consideration.

Sincerely,
Triet Le
