Cover letter

Accenture Federal Services - Salesforce Data Management Lead

Job URL

Dear Hiring Manager,

Accenture Federal Services' mission to enhance national security and public safety through advanced technology resonates strongly with my career focus. As a Senior Salesforce Developer with extensive experience leading data migration projects from Microsoft Dynamics and NetCRM into Salesforce, I have successfully designed end-to-end data migration strategies aligning with the Salesforce Person Account model. At Amazon Web Services, I led complex data profiling, field-level mapping, and transformation initiatives leveraging MuleSoft DataWeave, ensuring data integrity, reconciliation, and stakeholder alignment — experience directly transferrable to your needs.

I have implemented robust deduplication frameworks using Salesforce native duplicate rules along with custom Apex probabilistic matching and Lightning Web Components, significantly improving data quality and governance. My proven knack for enabling governance controls, access-security models, and archiving strategies complements the goals described in your role. Moreover, my collaboration with data stewards and technical teams ensures seamless migration cutovers and post-migration validation.

I am confident my background in Salesforce data management, governance, and integration with MuleSoft equips me to drive your data migration initiatives and data quality goals at Accenture Federal Services effectively.

Thank you for your consideration.

Sincerely,
Triet Le
