Cover letter

Airbyte - Customer Support Developer (Databases)

Job URL

Dear Hiring Manager,

I am excited to apply for the Customer Support Developer (Databases) role at Airbyte. Throughout my 7+ years in enterprise technology and software engineering, I have developed strong expertise in database troubleshooting, Java-based development, and data integration—core skills required to resolve complex issues your customers face. My experience at AWS and Docker involved deep involvement with relational databases, CDC mechanisms, query optimization, and cloud data warehousing platforms like Snowflake and Redshift, closely aligning with the challenges in your role.

Notably, I spearheaded initiatives at Docker to develop automated troubleshooting playbooks and contributed bug fixes to open-source connectors, significantly reducing resolution times and improving customer satisfaction. These efforts leveraged my fluency in Java, Kotlin-like JVM debugging skills, and adeptness with JDBC and database authentication protocols. At AWS, I successfully managed escalated database sync issues using logs, replication slots, and sync state recovery, which enhanced integration reliability.

My strong communication skills and cross-team collaboration will ensure actionable feedback loops between customers, Engineering, and Product teams. Coupled with a proactive mindset and experience with AI-assisted workflows, I am well-prepared to empower Airbyte’s customers with scalable support and impactful technical solutions.

Thank you for considering my application.

Sincerely,
Triet Le
