Job description

Cherokee Federal - Agentforce Salesforce Quality Assurance Tester

Job URL

Agentforce Salesforce Quality Assurance Tester

Cherokee Federal is seeking a Salesforce Quality Assurance Tester to support a federal Agentforce initiative on the Salesforce Public Sector Solutions platform. The role develops and executes testing across Salesforce configuration, custom development, integrations, and AI agents, while managing defects and supporting quality throughout Agile releases in a regulated environment.

GovernmentNon ProfitProfessional ServicesMarketingPublic Relations

No H1BSecurity Clearance RequiredU.S. Citizen Only

Responsibilities

Develop, maintain, and execute comprehensive test plans, test cases, and test scripts across Salesforce configuration, customization, and integration work throughout the release lifecycle

Work with government leads and Product Owners to understand acceptance criteria, clarify testing scope, and confirm release timing for new enhancement requests

Perform functional, regression, integration, end-to-end, and user acceptance testing (UAT) support across sprints and Salesforce releases

Validate declarative configuration and automation, including Flow (record-triggered, screen flows, scheduled flows), approvals, validation rules, page layouts, and Lightning App Builder, ensuring intended behavior and operational accuracy

Test custom development, including Apex, Lightning Web Components, and triggers, and perform backend validation using SOQL as needed

Validate integrations between Salesforce and external systems (e.g., MuleSoft, REST/SOAP APIs, middleware), confirming data integrity across systems

Test Agentforce agents, validating that natural-language utterances select the correct topic and invoke the correct action (Apex action, Flow, or prompt template), including near-miss utterances that should not trigger an action

Validate prompt templates built in Prompt Builder for accuracy and proper grounding in source data (e.g., Data Cloud); test for hallucinated, incomplete, or off-topic responses

Test agent guardrails and scope adherence, confirming agents decline out-of-scope requests and do not surface data outside authorized boundaries

Design and execute agent test cases using Agentforce Testing Center, including batch evaluation against expected outcomes and multi-turn conversation flows

Establish evaluation criteria for non-deterministic outputs (grounding, accuracy, completeness) rather than relying solely on exact-match assertions

Log, track, and manage defects through resolution using tools such as Jira or Azure DevOps; clearly document reproduction steps, severity, and expected versus actual results

Verify data integrity and reporting/dashboard accuracy, including exception paths and operational reporting needs

Support Salesforce Public Sector Solutions activities, including release readiness, deployment validation across

sandboxes and production, and post-release stabilization

Ensure test coverage and QA practices are scalable, maintainable, and aligned with governance, auditability, and compliance expectations in a regulated environment

Present formal and informal oral and written briefings to government managers; produce executive-ready test summaries, defect reports, and quality status updates

Perform other job-related duties as assigned

Qualification

Required

As required by our governmental client, this position requires U.S. Citizenship AND Secret Clearance

- Bachelor's degree with preferred study in Computer Science, Information Science, Information Systems Management, Math, Statistics, Operations Research, or Engineering and a minimum of four (4) years of experience. Six (6) years of work experience in a related field may be substituted for education
- Demonstrated experience performing QA and testing in an Agile delivery environment, including test planning, test case development, and defect management
- Proven ability to design and execute test cases from user stories and acceptance criteria, including exception paths
- Hands-on experience testing Salesforce applications, including declarative configuration and automation such as Salesforce Flow
- Experience validating custom development (Apex, Lightning Web Components, triggers) and performing backend validation using SOQL
- Experience testing Salesforce integrations with external systems (e.g., MuleSoft, REST/SOAP APIs)
- Experience with defect-tracking and test-management tools (e.g., Jira, Azure DevOps, TestRail)
- U.S. Citizenship is required
- Must pass pre-employment qualifications of Cherokee Federal
- Strong written and verbal communication, including producing executive-ready test summaries and briefing senior government stakeholders
- Precise defect documentation: clear reproduction steps, severity, and expected versus actual results
- Direct collaboration with Product Owners and government leads to clarify acceptance criteria and testing scope

Preferred

- Hands-on experience testing Agentforce agents or other conversational AI / LLM-based systems
- Familiarity with Agentforce Testing Center, Prompt Builder, and Data Cloud grounding
- Working understanding on how to test non-deterministic AI output (grounding, hallucination, evaluation

methodology)
