Cover letter

Claritev - Principal Engineer/Architect, Application Engineering

Job URL

Dear Hiring Manager,

Claritev’s mission to enhance healthcare transparency and affordability through data-driven solutions resonates with my professional focus as a Principal Salesforce Engineer. My 7+ years of hands-on experience architecting enterprise-scale Salesforce Sales Cloud applications, particularly in healthcare and payment domains, align closely with your critical requirements.

At Docker and Amazon Web Services, I led the design and implementation of scalable Salesforce Sales Cloud platforms integrating ERP and third-party systems using REST/SOAP APIs and event-driven architectures. I significantly improved system performance and data integrity while enforcing robust security models with permission sets, sharing rules, and field-level security.

Notably, I spearheaded AI-driven solution designs embedding Agentforce and Einstein AI capabilities to enhance case triage accuracy and customer service workflows, directly addressing the increasing demand for intelligent automation. My strong expertise in Apex, Lightning Web Components, Salesforce Data Cloud, and agile SDLC practices such as Kanban and continuous integration ensures high-quality and maintainable code delivery.

I am confident my deep technical acumen and collaborative approach will enable Claritev to optimize and evolve its Salesforce Sales Cloud environment, delivering measurable business value and user adoption. I look forward to the opportunity to contribute to your innovative healthcare technology initiatives.

Sincerely,
Triet Le
