Growth OpportunitiesNo H1B

Responsibilities

Contribute to Salesforce platform architecture and solution design, including data architecture, integration strategy, environment design, and release management approaches

Design and implement scalable Salesforce solutions using sound architectural principles, enterprise design patterns, and platform governance standards

Develop and maintain Salesforce applications, custom components, and workflow logic using Apex, Lightning Web Components (LWC), Flows, and declarative automation

Configure and extend Salesforce managed packages, ensuring compatibility with custom solutions and enterprise requirements

Design and maintain scalable custom data models that integrate seamlessly with managed package architectures

Develop and support opportunity-based and case-based workflows leveraging- Sales Cloud and Service Cloud capabilities across students, employees, faculty, research, donor and fundraising, marketing and external use cases

Design and implement Salesforce integrations using APIs, middleware, and other integration technologies to support internal and external systems

Build advanced reports, dashboards, and analytics to support academic, administrative, engagement, and operational decision making

Configure and maintain role-based- security, permissions, and access controls in alignment with institutional governance and compliance requirements

Design, deploy, and support secure, user friendly Experience Cloud solutions that enable guided workflows and -self-service- engagement

Support Salesforce org development and administration, including environment management, testing, release coordination, and deployment activities

Provide technical support through issue triage, troubleshooting, root cause- analysis, and resolution

Contribute to the design and implementation of emerging enterprise capabilities, including Data360 (data unification and activation) and Salesforce Agentforce (AI assisted- workflows)

Ensure all Salesforce solutions comply with institutional and regulatory requirements governing HIPAA regulated medical data, FERPA- protected- student data, confidential information, and personally identifiable information

(PII), including HIPAA, FERPA, and GDPR where applicable

Collaborate with technical teams and stakeholders across the university to align Salesforce solutions with broader information management and modernization strategies

Serve as a subject matter expert for Salesforce development,- supporting ongoing platform modernization and evolution across Cornell's Salesforce ecosystem

While position responsibilities vary, every member of our community is expected to foster a culture of belonging and a healthy work environment by communicating across differences; being cooperative, collaborative, open, and welcoming; showing respect, compassion, and empathy; engaging and supporting others regardless of background or perspective; speaking up when others are being excluded or treated inappropriately; and supporting work/life integration of oneself and others

Required

Bachelor's degree in computer science, Information Systems, or a related field, or an equivalent combination of education and relevant experience

Five (5)+ years of hands-on Salesforce development experience in complex, enterprise environments

Demonstrated experience working with multiple Salesforce managed packages

Strong hands-on experience with the Salesforce platform and core data models, including development using Apex, Lightning Web Components (LWC), Flows, declarative automation, validation rules, security and sharing models, and overall Salesforce application configuration and customization

Experience designing scalable Salesforce solutions, including data models, integrations, and platform design patterns, and contributing to Salesforce platform architecture and solution design in alignment with enterprise architecture standards

Experience designing and supporting Salesforce integrations with external systems using APIs, integration middleware, and related technologies

Experience working within structured environment strategies, release management processes, and platform governance frameworks, and participating in architecture reviews and technical design discussions to support platform scalability, stability, and long-term sustainability

Experience working with sensitive and regulated data, including HIPAA-regulated medical data, FERPA-protected student data, confidential data, and PII, in compliance with privacy and security requirements

Experience supporting Salesforce Experience Cloud solutions and user-facing workflows

Experience translating business requirements and user stories into technical designs, implementing solutions, testing, and deployments

Strong analytical, problem-solving, and troubleshooting skills

Strong written and verbal communication skills, with the ability to collaborate across technical and non-technical stakeholders

Ability to work independently and collaboratively in a complex, multi-stakeholder environment

Ability to cultivate and develop inclusive working relationships with students, faculty, staff, and community members

Preferred

Experience working and supporting large-scale, multi-year enterprise implementations, particularly in higher education, healthcare, nonprofit, or similarly complex environments

Experience working with emerging Salesforce capabilities, including Data360 (data unification and activation), Salesforce Agentforce, and other AI-assisted or next-generation platform features

Experience supporting Salesforce analytics and reporting solutions, such as CRM Analytics, TableauNext, or advanced reporting frameworks

Experience integrating Salesforce with Marketing Cloud, including preference and consent management, audience activation, and engagement data synchronization

Salesforce certifications such as Platform Developer I or II, Salesforce Certified System Architect, Integration Architecture Designer, Data Architecture and Management Designer, Salesforce AI Specialist, or equivalent

Experience operating within formal governance structures, including data governance, security review, architecture review boards, and enterprise change management processes

Demonstrated ability to work effectively across multiple business units, balancing standardization with local requirements

Experience partnering with system integrators and external vendors in complex delivery models

Experience contributing to platform modernization initiatives, including technical debt reduction, adoption of new Salesforce features, and continuous improvement practices

Benefits

Eligible for remote work anywhere within the United States, subject to Cornell University's approval process and applicable requirements.
