# Cover letter

Cornell University - Salesforce Platform Developer (CEMI)

Job URL

Dear Hiring Manager,

Cornell University's modernization initiative requires a Salesforce Platform Developer skilled in architecting and delivering secure, scalable solutions aligned with institutional compliance and multi-stakeholder engagement. With over seven years of progressive Salesforce development experience in complex enterprise and healthcare environments, I bring deep expertise in Apex, Lightning Web Components, Salesforce Flows, and managed packages that directly aligns with your job's technical priorities.

Notably, at Docker and AWS, I architected scalable custom data models and integrations leveraging REST APIs, event-driven middleware patterns, and OAuth-based secure authentication, supporting HIPAA and FERPA-regulated use cases. I led AI-assisted workflow implementations using Agentforce, enhancing case triage accuracy and operational efficiency. My work managing robust role-based security models and compliance reviews maps naturally to Cornell's rigorous governance needs.

My combination of hands-on Salesforce technical skills, architectural design experience, and commitment to secure, maintainable platform evolution will allow me to contribute effectively to your platform modernization efforts. I look forward to collaborating across Cornell’s diverse teams to deliver innovative Salesforce solutions that empower faculty, students, and staff alike.

Sincerely,
Triet Le
