Job description

CourtAvenue - Salesforce Solution Architect

Job URL

Salesforce Solution Architect

GTX Solutions, a CourtAvenue Company, is a boutique consulting firm focused on customer data, Customer Data Platforms, real-time activation, personalization, and MarTech integrations. The Salesforce Solution Architect leads platform strategy and architecture across the Salesforce stack, setting the roadmap, defining standards, overseeing journeys and integrations, managing platform costs and deliverability, and mentoring technical team members.

H1B Sponsor Likely

Responsibilities

Own the Salesforce platform strategy and roadmap for the program across Marketing Cloud, Data 360 and related capabilities, including personalization and AI features

Define architecture and configuration standards, including business units, data extensions, automations, integrations and environment governance

Assess the current-state platform during transition: document journeys, automations, suppression logic and configuration, and identify risks and improvement opportunities

Oversee journey design and build so entry, exit, suppression and prioritization logic is sound, documented and testable

Design integrations between the customer data foundation, Data 360, Marketing Cloud and downstream channels including email, SMS and direct mail

Monitor and manage platform consumption, including Data 360 credits, and design cost-aware refresh and activation patterns

Oversee email deliverability, including domain and IP reputation, inbox placement and coordination with other senders on shared domains

Design automation for recurring program processes, such as incentive and offer updates, to reduce manual effort and risk

Establish QA and deployment standards and runbooks with the delivery team

Evaluate and recommend new platform capabilities, features and licensing, and lead the technical relationship with the platform vendor

Partner with the Customer Data Architect on data models, identity and audience inputs, and with CRM strategy and operations on requirements and send readiness

Guide and mentor solutions engineers and journey builders on the team
