Job description

Elastic - Senior Salesforce Engineer

Job URL

Senior Salesforce Engineer

Elastic is a search AI company providing cloud-based solutions for search, security, and observability. The Senior Salesforce Engineer will design, build, and support full-stack features and enterprise integrations across Salesforce, MuleSoft, and related platforms, while using AI-assisted development tools. The role also focuses on scaling platform architecture, automating revenue processes, and improving engineering practices through the full software lifecycle.

Responsibilities

Design, build, and ship full-stack features end-to-end — UI, APIs, business logic, data models, and integrations — with a strong bias for clean, maintainable, well-tested code

Build modern frontend experiences (component-based UI, responsive design) and robust backend services and APIs, applying solid object-oriented and software design principles

Use AI-assisted development tools — Cursor, Claude Code, Codex, GitHub Copilot, or similar — throughout the SDLC: scaffolding, refactoring, test generation, debugging, and code review, while maintaining engineering rigor over AI-generated output

Design and implement integrations using REST APIs, event-driven patterns, and enterprise integration practices

Where the work runs on Salesforce, develop using Lightning Web Components (LWC), Apex, SOQL/SOSL, Flows, and the platform's security model — with support to ramp up if you're new to the platform

Explore and build agentic and AI-powered features (e.g., Agent Builder, workflow automation, AI agents) that bring real automation and intelligence into business processes, with appropriate governance and human-in-the-loop checks

Own features through the full lifecycle: solution design, development, testing, deployment, and production support

Contribute to CI/CD, automated testing, code reviews, and Agile ceremonies; and raise the bar on engineering practices across the team

Qualification

Full-Stack Software EngineeringJavaScript/TypeScriptRESTful API DesignSQLData ModelingAI-Assisted CodingSoftware Design PatternsSoftware Development Life Cycle (SDLC)Agile MethodologiesGitCI/CDSalesforce

Required

5+ years of professional full-stack software engineering experience — strong fundamentals across frontend, backend, APIs, and data

Bachelor's degree in Computer Science, Engineering, Information Systems, or a related technical discipline

Proficiency in modern frontend technologies (JavaScript/TypeScript, HTML, CSS, modern frameworks) and backend development (object-oriented programming, RESTful API design, databases/SQL, data modeling)

Hands-on, daily experience using AI-assisted coding tools such as Cursor, Claude Code, Codex, GitHub Copilot, or similar — able to write precise prompts and critically evaluate AI-generated code for correctness, security, and performance

Solid grounding in software design patterns, SDLC, Agile methodologies, Git, and CI/CD practices

Strong analytical and problem-solving skills, with the ability to independently design and deliver scalable technical solutions

Excellent communication and cross-functional collaboration skills

Preferred

A true engineer at heart: someone who can reason about architecture, write clean code, and diagnose hard bugs — with or without AI in the loop

Genuinely AI-native: you reach for Cursor, Claude Code, or Codex by default, and use them to build fluency across the stack, not just in your specialty

Curious and adaptable — comfortable picking up new platforms (including Salesforce, Mulesoft) quickly when the work calls for it

Ownership mindset: you drive features to done, care about quality, and elevate the engineers around you

Excited about applying AI meaningfully to real business problems — automation, decision support, and smarter workflows

Benefits

This role is currently eligible to participate in Elastic's stock program.

A company-matched 401k with dollar-for-dollar matching up to 6% of eligible earnings.

Health coverage for you and your family in many locations.

Ability to craft your calendar with flexible locations and schedules for many roles.

Generous number of vacation days each year.

We match up to $2000 (or local currency equivalent) for financial donations and service.

Up to 40 hours each year to use toward volunteer projects you love.

Minimum of 16 weeks of parental leave
