HIKE2 - Salesforce Omnistudio Solution Architect

Job URL

Dear Hiring Manager,

I am excited to apply for the Salesforce Omnistudio Solution Architect position at HIKE2. With over seven years of experience designing and architecting scalable Salesforce solutions, I bring deep expertise in OmniStudio tools including FlexCards, OmniScripts, DataRaptors, and Integration Procedures. My recent role at Docker involved leading OmniStudio implementations that improved guided workflows, optimized integrations using REST APIs and OAuth, and ensured scalable, secure architectural practices.

I have a proven track record of translating complex business requirements into maintainable and performant technical architectures while serving as a trusted advisor across project lifecycles. At AWS, I developed healthcare and enterprise Salesforce solutions focusing on data integrity, compliance, and high adoption rates. My ability to lead discovery sessions, produce detailed technical documentation, and provide technical mentorship aligns directly with the needs of this position.

Moreover, my certifications as a Salesforce Application Architect and Vlocity Platform Developer validate my technical mastery and architectural acumen. I am confident that my experience integrating Salesforce with external systems and delivering enterprise-grade OmniStudio solutions will enable me to add significant value to HIKE2's client transformation initiatives.

Thank you for considering my application. I look forward to the opportunity to contribute to your team.

Sincerely,
Triet Le
