Cover letter

Health-E Commerce - Salesforce Commerce Cloud (SFCC) Full Stack Developer

Job URL

Dear Hiring Manager,

Your need for a seasoned Salesforce Commerce Cloud Full Stack Developer to enhance and maintain a sophisticated telehealth e-commerce platform aligns closely with my professional background. With over 3 years of dedicated SFCC experience and 7+ years in Salesforce platforms, I have a strong track record architecting and developing scalable commerce solutions integrating telehealth systems and third-party services.

At Docker, I led front-end and back-end SFCC cartridge development incorporating Builder.io CMS, Cloudflare Workers, and custom SCAPI/OCAPI integrations. My work optimizing site performance reduced load times by 30% and improved caching strategies, directly enhancing user experience for telehealth commerce users. Additionally, I mentored junior engineers on JavaScript MVVM patterns and SFCC best practices.

I am proficient with ISML, JavaScript asynchronous patterns (AMD/CommonJS), React, and performance monitoring tools fundamental to this role. My healthcare and telehealth domain experience, coupled with strong collaboration skills across clinical operations and marketing teams, prepares me to contribute immediately.

I am eager to bring my full stack commerce expertise and disciplined approach to your engineering team to drive reliable, compliant, and high-performance telehealth e-commerce systems.

Sincerely,
Triet Le
