Cover letter

Hyster-Yale Materials Handling - Salesforce Technical Architect

Job URL

Dear Hiring Manager,

Hyster-Yale Material Handling’s need for a visionary Salesforce Technical Architect to lead enterprise-scale Salesforce solutions aligns perfectly with my extensive experience architecting scalable, secure, and integrated Salesforce environments. With over 10 years of hands-on Salesforce expertise and 7 years specifically in architecture roles, I have successfully delivered complex solutions across Sales, Service, Experience, and Manufacturing Clouds in highly regulated, multi-region enterprises.

At Docker and AWS, I led critical initiatives including Salesforce OmniStudio solution design, robust API integrations, secure access model implementations, and platform modernization, resulting in measurable improvements such as a 15% reduction in access-related support issues and a 20% decrease in email-based customer follow-ups. My strong understanding of Salesforce security architecture, governance, and CI/CD best practices has enabled me to build sustainable platforms that support long-term business growth.

I excel at working closely with stakeholders to translate complex requirements into feasible architectural designs and managing cross-functional technical teams towards reliable solution delivery. I am confident my deep Salesforce architecture knowledge, combined with proven leadership in integrations and platform enhancements, will enable me to drive Hyster-Yale’s digital transformation initiatives successfully.

Thank you for considering my application.

Sincerely,
Triet Le
