Growth OpportunitiesNo H1B

Responsibilities

Design, implement, and maintain Salesforce solutions that meet business requirements and align with best practices

Develop custom solutions using Apex, Lightning Web Components (LWC), Visualforce, and other Salesforce technologies

Provide architectural guidance and ensure that solutions are scalable, efficient, and follow Salesforce platform best practices

Develop and maintain Salesforce CPQ solutions, including complex product configurations, pricing rules, and quote templates

Optimize CPQ processes for efficiency and accuracy, ensuring alignment with business goals

Troubleshoot and resolve CPQ-related issues to ensure smooth operations

Customize and enhance Sales Cloud and Service Cloud to meet the needs of sales, service, and support teams

Build and optimize workflows, approval processes, and automation to streamline business operations

Provide hands-on support for end-users and troubleshoot issues as they arise

Implement and customize Experience Cloud solutions to enhance customer and partner engagement through portals and communities

Design and develop integrations between Salesforce and other enterprise systems (ERP, marketing automation, etc.) using tools like MuleSoft, REST/SOAP APIs, and middleware platforms

Monitor and maintain integration performance, ensuring data integrity and seamless communication between systems

Perform regular system audits, data hygiene tasks, and platform updates to ensure optimal performance

Analyze business requirements and translate them into technical solutions that drive efficiency and innovation

Build and deploy new Salesforce features, applications, and enhancements using declarative and programmatic tools

Collaborate with cross-functional teams to gather requirements, prototype solutions, and deliver high-quality results
