Cover letter

Motorola Solutions - Software Engineer (Salesforce) (US REMOTE)

Job URL

Dear Hiring Manager,

I am eager to bring my 7+ years of Salesforce development experience to Motorola Solutions as a Software Engineer supporting your Envysion business. My expertise designing, implementing, and optimizing scalable Salesforce solutions directly aligns with your need for a developer skilled in Apex, Lightning Web Components, Visualforce, and Revenue Cloud CPQ.

At Docker and AWS, I delivered complex CPQ configurations and integrations with MuleSoft and REST APIs that improved quoting accuracy by 25% and streamlined billing workflows. I have optimized Sales and Service Cloud processes through automation and designed secure, scalable Salesforce architectures that reduce support incidents and accelerate business operations. Additionally, my experience supporting Experience Cloud portals complements your goals to enhance customer and partner engagement.

My background in driving Salesforce development lifecycle best practices—including sandbox management, CI/CD, and security model enforcement—ensures projects are delivered with quality and compliance. I am confident my deep technical capabilities and problem-solving skills will contribute to your enterprise video security and analytics solutions, enabling you to innovate and drive growth efficiently.

Thank you for considering my application. I look forward to the opportunity to discuss how my skills align with your engineering challenges.

Sincerely,
Triet Le
