Cover letter

Onyx Government Services - Senior ETL Developer

Job URL

Dear Hiring Manager,

I am excited to apply for the Senior ETL Developer position at Onyx Government Services. Your need for a technically skilled developer to design, develop, and maintain scalable ETL/ELT pipelines with dbt and strong SQL expertise perfectly aligns with my 7+ years of experience in enterprise data management and integration. I have a proven track record delivering optimized data transformation workflows using dbt models, tests, snapshots, and macros, combined with deep experience in PL/SQL and converting legacy procedures into SSIS packages for improved maintainability and efficiency.

At Docker, I designed and automated CI/CD pipelines integrating dbt and Git, which enhanced deployment reliability and reduced errors by 30%. At AWS, I delivered complex SQL optimization and automated data quality assurance frameworks that improved data integrity and pipeline resilience critical for analytics initiatives. My active Public Trust clearance and experience working in fast-paced, Agile environments make me well-suited to handle the security and collaboration demands of your projects.

I am confident my skills in database management, ETL development, and cross-functional mentorship will enable me to contribute effectively to Onyx's mission of providing cutting-edge government data solutions. I look forward to the opportunity to discuss how I can support your team.

Thank you for your consideration.

Sincerely,
Triet Le
