Job description

TailorCare - Senior Software Engineer

Job URL

Senior Software Engineer

TailorCare is transforming specialty care through a personalized, evidence-based program that improves outcomes for patients with joint, back, and muscle conditions. The Senior Software Engineer will build and own complex features for Care Team Enablement using Salesforce, TypeScript services, AWS, and integrations while supporting secure systems that handle PHI under HIPAA.

HealthcareHealth CareMedical

Responsibilities

Own complex features end to end: turn ambiguous requirements into a design, build it, test it, ship it, and handle what comes after

Build on the Salesforce platform with Apex, Lightning components, and platform integrations, alongside our Salesforce administrator

Design and maintain the TypeScript services and integrations the team owns alongside Salesforce, running on AWS

Use AI-assisted development tools in your daily work, and help the team learn where they earn their keep

Keep the delivery path healthy: CI/CD pipelines, automated tests, and deployment tooling

Review code with an eye on correctness, security, and the next person who has to change it

Join sprint planning and design discussions, raise technical risk early, and mentor engineers through code and design feedback

Qualification

Salesforce DevelopmentApexSOQLLightning ComponentsSalesforce Platform APIsTypeScriptNode.jsAWSPostgreSQLCI/CDAutomated TestingHIPAA-Regulated Data

Required

5+ years delivering production software in a planned yet agile environment

Hands-on Salesforce development experience: Apex, SOQL, Lightning components, and platform APIs

Depth in TypeScript and Node or comparable server-side language experience

Experience designing and operating services on AWS (Lambda, SQS/SNS, IAM) with PostgreSQL for relational data

Experience with CI/CD and deployment pipelines, including the testing that makes them safe

Experience converting business requirements into technical designs and owning features through production

Demonstrated strong ownership of work coupled with an ability to collaborate openly and transparently

Bachelor's degree in Computer Science, Engineering, or a related field, or equivalent practical experience

Preferred

Experience building software that handles PHI under HIPAA or comparable regulated data

Experience with telephony or contact center platforms, healthcare, and/or startups

Benefits

Meaningful work with the opportunity to make a positive impact

Remote-first work environment with options for a hybrid work model in Nashville

Generous paid time off (PTO) and holiday plans

Paid parental leave

Flexibility and autonomy to support a healthy work-life balance

Medical, dental, vision, life, and disability insurance from Day 1

Wellness resources

Employer HSA contribution

401k plan with employer matching

Inclusive work environment with supportive teammates and open feedback
