Cover letter

TailorCare - Senior Software Engineer

Job URL

Dear Hiring Manager,

I am excited to apply for the Senior Software Engineer position at TailorCare. With over seven years of experience designing and delivering secure Salesforce and AWS solutions in highly regulated healthcare environments, I understand the critical importance of compliant PHI handling and seamless integration for improved specialty care outcomes.

In my current role at Docker, I architect and deploy enterprise Salesforce OmniStudio and Lightning Web Component solutions complemented by secure API integrations and scalable asynchronous processing. I spearheaded initiatives that reduced automation failures by 20% through governor-limit-conscious Apex and automated CI/CD pipelines. At AWS, I designed HIPAA-aligned member service workflows, integrating Salesforce with TypeScript services running on AWS Lambda and PostgreSQL, ensuring secure and resilient cloud services.

These experiences uniquely position me to tackle TailorCare’s core challenges of transforming ambiguous requirements into robust, maintainable Salesforce and AWS solutions while safeguarding sensitive health data. My hands-on expertise with Apex, Lightning Components, TypeScript, Node.js, and AWS services, combined with strong ownership and collaboration skills, align naturally with your team's needs.

I look forward to contributing to TailorCare’s mission-driven innovation by building secure, user-friendly features that enable care teams to improve patient outcomes.

Sincerely,
Triet Le
