Job description

U.S. Soccer Foundation - Senior Manager, Salesforce & Technology

Job URL

Senior Manager, Salesforce & Technology

The U.S. Soccer Foundation helps young people embrace active and healthy lifestyles and cultivate critical life skills through soccer-based youth development programs. The Senior Manager, Salesforce & Technology serves as the Foundation’s primary internal technical resource for Salesforce CRM, supporting governance, administration, architecture, automation, reporting, integrations, and broader technology initiatives. The role also leads data visualization, supports Marketing Cloud integration, coordinates strategic technology projects, and advances data governance and scalable systems planning.

Non ProfitSocial MediaCharitySocial

Responsibilities

Serve as the primary administrator and technical owner of Salesforce CRM, including governance, user access, permissions, security settings, system configuration, architecture, documentation, and change management in accordance with established organizational policies and data-security practices

Design, build, test, and maintain Salesforce solutions, including objects, fields, flows, automations, validation rules, integrations, and other configurations that support evolving organization-wide and departmental needs while applying appropriate quality-assurance, testing, release-management, and documentation practices

Partner with staff across departments to translate business and programmatic requirements into scalable Salesforce solutions, while maintaining shared responsibility for departmental processes, data quality, and appropriate functional Salesforce expertise and supporting adoption through training, guidance, and user documentation, as appropriate

Lead the technical development of Salesforce reports, dashboards, Tableau solutions, and other data visualizations in partnership with teams responsible for defining business requirements, KPIs, and intended audiences and help ensure that reporting is accurate, accessible, timely, and actionable

Provide dedicated capacity for Salesforce CRM–Marketing Cloud integration and technical support, initially focused on data architecture, synchronization, troubleshooting, and CRM enhancements that support digital audience engagement and applicable data-privacy, consent-management, and email-marketing requirements. Over time, this responsibility may expand to support the technology components of additional marketing operations solutions, and especially to bring about technology needs alongside continued Salesforce CRM–Marketing Cloud integration, reflecting the Foundation’s evolving marketing function

Help shape and advance the Foundation’s broader technology ecosystem, ensuring that evolving digital program delivery, marketing, and audience-engagement needs are supported by an effective and scalable technology infrastructure

Maintain and prioritize an organization-wide roadmap of Salesforce enhancements and strategic technology projects, providing hands-on execution and coordinating external consultants when specialized expertise or additional capacity is required while communicating project status, risks, dependencies, and recommended decisions to relevant stakeholders

Support broader organizational technology, AI, IT, cybersecurity, access management, and technology governance needs in partnership with the AVP, Finance & Administration and the Foundation's managed technology providers, including support for vendor management, software and systems inventory, access-review processes, and technology-related policy implementation, as assigned

Monitor emerging technology needs and recommend practical improvements that strengthen security, efficiency, scalability, reporting, and the effective use of technology

Develop and maintain clear technical documentation, including system architecture, configuration decisions, data definitions, integration maps, administrative procedures, and end-user guidance

Help establish and reinforce data-governance standards, including data-quality practices, ownership expectations, retention considerations, and appropriate access controls

Perform other duties as assigned in support of the Foundation’s mission and operational needs
