William Blair - Salesforce Platform Operations & Enablement Specialist

Job URL

Dear Hiring Manager,

William Blair's need for a skilled Salesforce Platform Operations & Enablement Specialist to manage advanced administration, operational stability, data integrity, and user enablement within Wealth Management strongly aligns with my background. With over seven years of experience supporting complex Salesforce environments, I have successfully executed user access administration, security management, declarative automation with Flow, and platform release readiness in financial services and enterprise settings.

Notably, at Docker, I designed scalable Flow automations and improved platform data quality reducing automation failures by 20%. At AWS, I enhanced data integrity and user readiness through comprehensive training and support, improving adoption while managing security and access for large user populations. My certifications as a Salesforce Advanced Administrator and Platform App Builder underpin my technical expertise in Lightning Experience, complex Flow design, reports, dashboards, and data management.

I am adept at bridging business and technical stakeholders to deliver scalable, maintainable Salesforce solutions and continuous platform improvements. My hands-on experience troubleshooting, documenting, and supporting Salesforce production environments equips me to drive operational excellence for William Blair’s Wealth Management platform while enabling seamless user adoption and platform modernization.

Thank you for considering my application. I look forward to the opportunity to contribute to William Blair’s continued success.
